

A Survey of Random Walks on a Percolation Cluster

Dayue Chen

dayue@pku.edu.cn

Consider the Bernoulli bond percolation on graph G and suppose there is an infinite cluster C . We would like to compare C with G by running a random walk on C , hoping that C and G share many properties. In this talk we shall examine recurrence and speed of a random walk, and collisions of two independent random walks. Some open problems will be discussed.
